

KOVÁCS KFT.
Corporate Social
Responsibility and
Sustainability

INTRODUCTION

Kovács Kft, a financially independent, Hungarian-owned family business with international relations, follows the idea of corporate social responsibility and sustainable development by establishing a multifaceted relationship with its environment for the widest possible range of stakeholders (colleagues, business partners, suppliers and the local community). Taking into account the needs of the versatile relationship with the environment, it guarantees the development of the company and the development of a positive corporate image.

For our Company, responsibility means not only complying with all formalities and legal requirements, but also placing more emphasis on human resources, the environment and the relationship with the company's environment through voluntary commitment. Our goal is to continuously increase the efficiency of the equipments we use. Our company takes into account and adopts and adheres to the principles of the UN Global Compact in developing its strategy, which is in line with the 10 generally accepted principles of human rights, labor, the environment and anti-corruption.

CORPORATE SOCIAL RESPONSIBILITY and SUSTAINABILITY

1. Compliance with laws and regulations

rights.

Our commitment begins with compliance with laws and regulations. We know and comply with the laws, international standards, social norms, customer expectations and other regulations required for legal and sustainable business operations.

We comply with all of our valid contractual obligations and will not abuse our

2. Humans + Profit + Globe

We are committed to meet our current needs without compromising the opportunities of future generations. Therefore, we take economic, environmental and social factors together in our operations and business decisions.

3. Sustainability is our strict commitment

As a large Hungarian company, Kovács Kft. Is committed to its role in the field of sustainability..

Every day, no matter where we work within the company, we focus on sustainability to maintain a balance between economic success, environmental protection and social responsibility. We implement a sustainability strategy that covers each of our activities and our entire value chain: from manufacturing through processes with our customers to supporting local organizations and employee involvement.

4. Health, Safety and environmental protection

We provide a clean, safe and healthy work environment and are committed to maintaining a healthy environment. We regularly monitor working conditions at our facilities and take corrective action if necessary. Our goal is to minimize the impact of our operations on the natural environment. Efforts are being made to reduce the use of finite resources such as energy and water, as well as the emission of harmful substances such as waste..

5. More value add, less ecological footprint

The pursuit of carbon neutrality is central to our long-term sustainability strategy. In our investments, we focus on decisions that rationalize energy use, which supports our company's efforts to leave a smaller ecological footprint with increasing production volumes. The use of renewable energy sources provides an opportunity to create a cleaner, safer and healthier environment.
